

Adding Addendums to Workday

A practical workflow for faster, compliant contract updates

Why this workflow matters

When employee terms change (location, compensation, title, hours), addendums need to be created, approved, signed, stored, and traceable without manual delays or compliance risks.

1) Trigger event

- 1 Location move
- 2 Compensation change
- 3 Title change
- 4 Working hours change
- 5 Other contract-impacting updates

2) Auto-generate the correct document

Workday generates the correct document template based on country/legal entity, worker type, and contract vs addendum rules.

3) Routing and approvals

- 1 HRBP
- 2 Manager
- 3 Legal (as needed)
- 4 Payroll checkpoint for pay-impacting changes

4) E-signature step

The employee receives the contract or addendum automatically for signature via Workday e-sign integration such as DocuSign or Adobe Sign.

5) Status tracking

A dashboard provides visibility across stages: Draft → Sent → Signed → Completed → Exceptions.

6) Auto-filing and retention

The signed copy is stored automatically in the worker's document record with no manual saving required.

7) Audit trail

- 1 Who changed what
- 2 When document was sent
- 3 When signed
- 4 Approval history
- 5 Version control

Outcome

- 1 Speed and consistency
- 2 Compliance and governance
- 3 Employee experience
- 4 Operational visibility
