

Build Your AI Strategy on These Four Pillars

Four foundations that provide an organisational readiness snapshot — and lay the groundwork for an AI agent implementation that is purposeful, trusted, and built to scale.

01

Strategic
agreement

02

Data
readiness

03

Technology
infrastructure

04

Governance &
measurement

1

Strategic agreement

Before determining your first use case, create a shared view of what the agent is expected to achieve, the context it needs, and how people will work with it.

Business goals

What business goals will agentic AI help achieve?

Risk appetite

What is your organisation's risk appetite?

Agent data needs

What data does the agent need to succeed?

Team engagement

How will teams engage with this agent?

“Alignment is what turns an AI experiment into an enterprise capability.”

FOUNDATION 02

2

Data readiness

Agentic outputs are only as good as the quality of the underlying data. Your strategy must address:

Accessibility

Data accessibility across structured and unstructured sources.

Quality & governance

Data quality, governance, and security requirements.

Integration

Integration strategies for your current technology.

Improvement

Continuous data improvement mechanisms.

FOUNDATION 03

3

Technology infrastructure

Plan the right technological foundation with these principles.

Scalability

Handle growing computational demands.

Flexibility

Integrate with legacy systems.

Data accessibility

Access reliable data sources.

Trust

Implement guardrails and evaluation.

Security

Protect data and models.

Governance and measurement

Include strong governance frameworks and measurement approaches.

Ownership & accountability

Define clear ownership and accountability.

Ethical boundaries

Establish ethical guidelines and operational boundaries.

Risk protocols

Create risk management protocols.

Measurement frameworks

Set up measurement frameworks tied to business objectives.

Confidence-building review

Review and communicate what's working and what's not across business and technology teams to build confidence for future agents.

Continuous improvement

Implement continuous improvement mechanisms.
